## **GUIDancer 3.1 released**

### *Automated GUI testing for GEF applications and on MAC OSX*

Bredex GmbH announced today that version 3.1 of *GUIDancer*, the automated functional testing tool, is now available for download. As well adding support for the testing of GEF (Graphical Editing Framework) components, the new version is available for MAC OSX as a beta, and is compatible with Eclipse 3.5.

Increased platform and application support are not the only areas where the Eclipse-based test tool has been expanded. *GUIDancer's* efficient keyword-driven approach has also been extended to improve the testing of dynamic tables.

"Version 3.1 allows us to reach testers working on GEF applications and MAC OSX who want to attain a long-lasting and maintainable test-coverage, yet see the first successes from day one" said Hans-Joachim Brede, a Managing Director at the company. "We all know that a structured, modular approach is the key to successful test automation. *GUIDancer's* simple yet powerful concept supports reusability at every stage of the test process. Test coverage grows quickly and maintenance is drastically reduced compared to other approaches where programming effort is necessary to automate tests."

*GUIDancer* allows testers to automate tests from the user perspective without writing or editing any program code. Tests are created either by drag-and-drop from a library of actions or by recording actions from a running application. Both options lead to readable tests which are easy to expand, change and maintain against changes in an application.

Since releasing version 3.0 in April, the *GUIDancer* team has also added new actions to the *GUIDancer* library, including a simpler way of testing native dialogs. The software is available for download on the *GUIDancer* website, and a fully functional version can be tested with a demo-license. Live-demos of the software are available on request.

## **BREDEX GmbH**

Since 1987, BREDEX GmbH has been providing high quality information technology services in the areas of consultancy, analysis and design, software development, quality assurance and training. Based in Braunschweig, the company has a history of long term customer satisfaction and a focus on forward thinking, developing individual solutions that bring future standards to current project needs. BREDEX sells *GUIDancer*, which is a powerful and cost effective automatic test tool for Java and HTML applications.
